

Jonaer Casundo

Web Developer | Business Process Automation

Bacoor, Cavite, Philippines · +63 961 536 2067 · jcasundo.sedge@gmail.com

Dear Hiring Manager,

I'm a web developer who builds practical applications and automates business processes. I'm interested in opportunities where I can help turn repetitive, manual work into reliable digital workflows that make day-to-day operations clearer and more efficient.

Across software engineering and in-house development roles, I've designed and delivered web applications for internal operations, product and inventory data, tracking, and reporting. My experience includes PHP and Laravel, JavaScript, MySQL, responsive interfaces, API integrations, and technical support. I work to understand how people use a process today, translate their needs into useful features, and support those solutions through testing and delivery.

My projects include a centralized product database with SKU management and optimized search, delivery and inventory tracking, and a Laravel automation platform connecting workflow rules with OpenAI and Twilio for customer communications. I enjoy bringing systems together, reducing repetitive data entry and follow-up, and giving teams more accurate, accessible information.

My earlier experience in payment operations also gave me a strong appreciation for accuracy, reconciliation, and dependable records—qualities I bring to the systems I build. I would welcome the opportunity to contribute my hands-on development skills and process-focused approach to your team.

Thank you for your time and consideration. I look forward to discussing how I can support your web development and process improvement goals.

Sincerely,

Jonaer Casundo
